Company Overview

RaytonCorp is a purpose-built technology group delivering end-to-end managed IT, cybersecurity, digital forensics, and connectivity for organisations operating in complex, high-risk, and mission-critical environments.

You gain a single accountable partner for strategy, delivery, security, and support - eliminating the handovers, gaps, and vendor friction that increase risk and slow response. Our integrated group structure enables you to consolidate execution, governance, and operational accountability under one trusted partner, improving clarity, control, and stability.

Through our specialist divisions, you can access:

- Managed IT services across infrastructure, cloud, end-user computing, monitoring, and support
- Cybersecurity services including vulnerability management, penetration testing, threat detection, and incident response
- Digital forensics for investigations, litigation support, and intellectual property matters
- Connectivity & communications for reliable operations across distributed and remote environments

RaytonCorp supports organisations across industries where uptime, security, compliance, and control are non-negotiable. Our focus is measurable outcomes: stable operations, reduced risk, and a technology environment leadership can rely on.

Vision, Mission & Philosophy

Vision

To enable your organisation to operate with total confidence in technology - through resilient, secure, and integrated environments that support growth, continuity, and long-term success.

Mission

RaytonCorp acts as your single accountable technology partner, delivering managed IT, cybersecurity, digital forensics, and connectivity services that reduce risk, stabilise operations, and ensure critical systems perform when it matters most.

Philosophy

RaytonCorp is guided by a philosophy of Excellence, Accountability, Transparency, and Reliability.

You should be able to measure a technology partner by outcomes, not promises. Our approach prioritises disciplined execution, clear communication, and full ownership of the environments we manage. Every solution is built to enterprise standards and designed to withstand the demands of always-on, mission-critical operations.

The RaytonCorp Difference

RaytonCorp is built for organisations that cannot afford fragmented responsibility, unclear accountability, or operational uncertainty.

Instead of multiple providers managing interdependent systems, you gain a single accountable partner across IT, cybersecurity, and connectivity - eliminating the gaps, handovers, and blind spots that increase risk and delay resolution.

We take end-to-end ownership of the environments we support, from design and implementation through to security, monitoring, and day-to-day operations. This creates clear accountability, faster decision-making, and stronger operational control across critical systems.

You receive enterprise-grade governance with responsive local execution, combining proven technologies, disciplined operating frameworks, and experienced specialists. The result is robust oversight without sacrificing agility or service quality.

Through clear reporting and operational visibility, leadership gains meaningful insight into performance, risk, and compliance - enabling informed decisions and proactive management.

Above all, RaytonCorp is designed for high-availability environments where uptime, security, and control are non-negotiable.

Above all, RaytonCorp is designed for high-risk, high-availability environments, where uptime, security, and control are non-negotiable. Our solutions are engineered to perform under pressure and to support continuous operations without compromise.

Group Structure & Divisions

RaytonCorp operates through four specialised divisions, each purpose-built to deliver depth of expertise while working together as one integrated technology partner. This gives you comprehensive capability without the complexity of managing multiple service providers.

**One IT Partner,
Total Confidence**

Rayton Managed IT delivers the operational foundation your organisation depends on for stable, secure, and efficient day-to-day technology performance.

Core capabilities include:

- End-user computing and device management
- Infrastructure and cloud environments
- Service desk support (24/7) and on-site field services
- Proactive monitoring (NOC), maintenance, and support

Rayton Secure protects your organisation against evolving threats through proactive security operations and risk management.

Core capabilities include:

- Vulnerability assessments and penetration testing
- Threat hunting and incident response
- SIEM monitoring and compliance support (24/7 oversight)

Rayton Forensics provides specialised digital investigation services where accuracy, integrity, and evidentiary standards are critical.

Core capabilities include:

- Digital forensic investigations
- Litigation and arbitration support
- Intellectual property and data breach matters
- Court-ready reporting and expert evidence

Rayton Connect enables reliable connectivity and communications across multi-site, distributed, and remote environments.

Core capabilities include:

- Satellite connectivity solutions
- Business internet services
- Cloud-based VoIP and unified communications
- Connectivity for remote and mobile operations

The Industries We Serve

Industrial & Remote Operations

We support organisations operating across industrial sites, remote locations, and critical infrastructure with secure, resilient technology environments engineered for continuous operations - where downtime impacts safety, productivity, and compliance.

Transport & Logistics

We support fleet, depot, and distribution environments with stable systems and secure connectivity across multiple sites - where real-time operations, dispatch continuity, and frontline user support directly impact service delivery.

Legal Environments

RaytonCorp supports legal practices and compliance-focused organisations with secure infrastructure, forensic capability, and audit-ready systems that meet strict evidentiary, confidentiality, and governance requirements.

We support organisations across high-risk, compliance-driven, and operationally complex industries where reliability, security, and uptime are critical to success.

Public Sector & Government

We deliver secure, compliant, and resilient IT environments for public sector and government organisations, where regulatory adherence, data sovereignty, service continuity, and accountability are critical to public trust and effective service delivery.

Our Approach

RaytonCorp follows a disciplined, lifecycle-based approach designed to deliver stable, secure, and resilient technology environments over the long term.

We work through a structured model: Assess - Design - Implement - Operate - Optimise. This ensures your environment is properly understood, purpose-built, actively managed, and continuously improved as business needs evolve.

Our approach is grounded in proactive monitoring and risk reduction - identifying potential issues before they impact operations and addressing vulnerabilities before they become incidents.

All solutions are developed with a security-first, availability-focused mindset, ensuring systems remain resilient, compliant, and capable of supporting continuous operations.

Above all, we operate as a long-term technology partner - aligning service delivery to your operational objectives and taking ownership of performance, reliability, and outcomes over time.

Operational Outcomes We Deliver

RaytonCorp focuses on delivering measurable operational outcomes that support business continuity, risk management, and executive decision-making.

01.

By taking end-to-end ownership of critical environments, you reduce unplanned downtime and operational risk, keeping systems available in demanding, always-on operations.

02.

Our integrated security and governance approach strengthens your security posture and compliance, reducing exposure to cyber threats, regulatory breaches, and operational disruption.

03.

Through disciplined service delivery, you achieve predictable performance and costs - minimising reactive spend and planning with confidence. (Our managed services are SLA-measured, with 97.6% average technical support SLA compliance across 2024 & 2025.)

04.

You gain increased visibility and control through clear reporting, monitoring, and performance metrics - providing leadership with insight into system health, risk, and service effectiveness.

05.

When incidents occur, unified IT and cyber capability enables faster detection, response, and recovery - minimising impact and restoring operations quickly and safely.

Proof and Credibility

Case Study

Industry: Transport & Logistics

A mid-sized, multi-site transport and logistics operator with regional depots and a distributed workforce, operating in a 24/7 environment where system availability and secure connectivity are critical to daily operations.

Challenge

The client was managing multiple IT service providers across infrastructure, security, and connectivity. This fragmented approach resulted in:

- Limited visibility across systems
- Slow incident response and unclear accountability
- Increased operational risk due to inconsistent security controls
- Unplanned downtime impacting fleet operations and customer service

Solution

RaytonCorp was appointed as a single accountable technology partner to consolidate and stabilise the client's environment.

Our engagement included:

- A full assessment of infrastructure, security posture, and connectivity
- Consolidation of managed IT, cyber security, and monitoring under one operational framework
- Implementation of proactive monitoring and security controls
- Centralised reporting to provide operational and risk visibility
- Ongoing managed services and support aligned to 24/7 operational requirements

Outcomes in first 6 Months:

- 38% reduction in unplanned downtime across critical fleet and depot systems
- 52% faster incident resolution through unified IT + security ownership
- 24/7 monitoring coverage with proactive alerting and escalation
- Improved security posture, including standardised controls across all sites
- Single-vendor consolidation, reducing provider fragmentation from 4+ vendors to 1 accountable partner
- Predictable monthly IT operating costs, with measurable SLA-backed delivery (97.6% support compliance)

Our Message to You

Christo Boshoff

Chief Executive Officer and Founder

Message from the CEO & Founder

Technology should never be a source of uncertainty. It should give you control, resilience, and the confidence to execute your strategy without disruption.

RaytonCorp partners with organisations where uptime, security, and accountability are non-negotiable. Our role is to simplify complexity by taking end-to-end ownership of the environments your business depends on - IT, cybersecurity, connectivity, and the operational governance around them.

What differentiates RaytonCorp is an operational mindset: disciplined execution, measurable service levels, clear reporting, and leadership visibility into risk and performance. You don't gain another vendor - you gain a partner that takes accountability, reduces operational exposure, and keeps critical systems performing when it matters.

As the threat landscape evolves and operations become more distributed, our commitment remains the same: protect continuity, enable growth, and align technology performance to business outcomes - today and into the future.

We look forward to partnering with you.

Christo Boshoff

Why choose **RAYTON** CORP

Organisations don't need another IT vendor, they need a partner who understands the reality of running a high-risk, high-demand, 24/7 environment.

Technology is no longer a support function. It is a core driver of operational performance, risk, and business continuity. Yet in many organisations, it remains fragmented across multiple vendors, disconnected systems, and unclear accountability.

RaytonCorp exists to solve that.

We operate as a single, accountable technology partner, integrating managed IT, cybersecurity, digital forensics, and connectivity into one unified framework. This replaces complexity with clarity, giving leadership teams full visibility and control over the systems that keep the business running.

Our focus is not on managing technology, but on protecting the business. From uptime and security to compliance and response, every layer is designed to reduce risk, strengthen resilience, and ensure continuity in environments where downtime and failure carry real consequences.

This is supported by structured governance, executive-level reporting, and 24/7 operational oversight, turning technology from a reactive cost centre into a controlled, measurable business function.

RaytonCorp is not another supplier in your ecosystem. It is the layer that brings it together and takes responsibility for making it perform.

- **End-to-end capability under one accountable partner**
- **Reduced vendor complexity and clearer ownership**
- **24/7 operational support and proactive monitoring**
- **Unified IT + Cyber + Cloud + Connectivity ecosystem**
- **Executive-level reporting and governance**
- **Risk reduction and operational resilience**

END-TO-END IT PARTNER

A unified technology partner for complex, always-on, and regulated environments.
